Coefficients of morphism in the double leaves basis

A coefficient multiplies on the left. $F = \sum_j c_j \mathbb{LL}_j$, where $\mathbb{LL}_j = \overline{\mathrm{LL}}_{\underline{\underline{y}},\mathbf{f}_j} \circ \mathrm{LL}_{\underline{\underline{x}},\mathbf{e}_j}$ where

$$\underline{x} = \mathrm{t\,s\,t\,u\,u} \quad \text{and} \quad \underline{y} = \mathrm{s\,u\,u\,s\,s}.$$

Term	Coefficient	Source mask	Target mask
1	$-\alpha_{\mathrm{s}}$	26	7
2	α_{s}	29	23
3	2	24	23

$F =$

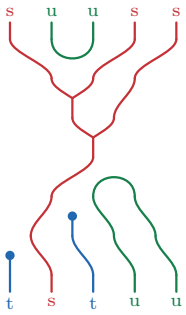

$p_1 = \alpha_{\mathrm{s}}$, in region 4.

Term 1

$c_1 = -\alpha_{\mathrm{s}}$.

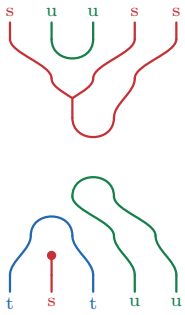

Source mask 26; target mask 7.

Term 2

$c_2 = \alpha_{\mathrm{s}}$.

Source mask 29; target mask 23.

Term 3

$c_3 = 2$.

Source mask 24; target mask 23.
